

Pills or push-ups?

Is social prescribing the answer to the NHS problems?

Kamila Hawthorne
GP, Mountain Ash
Bevan Commissioner

What underlies the NHS' issues?

Positive impacts	Negative impacts
<ul style="list-style-type: none"> ■ Increasing ability to keep people going for longer <ul style="list-style-type: none"> ■ Advances in cardiac and stroke management ■ Advances in obstetric care and care of premature babies ■ Genomics and medical technology ■ Robotic surgery ■ Care remains free at the point of access ■ Available to all, regardless of ability to pay 	<ul style="list-style-type: none"> ■ Staffing problems ■ Waiting times/ Waiting lists ■ Financial problems – 70% budget goes to people with long term conditions ■ Operational – over bureaucratic, time – consuming processes, no single electronic patient record ■ Not sufficiently joined up with Social Care ■ Changing demography – epidemiology of multi-morbidity ■ System can fail to deliver on things people value: joined up service, being listened to, having a say in what happens to them

"Epidemiology of Multimorbidity" – Lancet, May 2012

Traditional bio-medically framed explanations

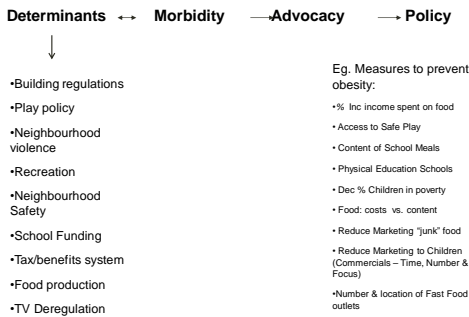

- Greedy & lazy
 - They eat too much
 - They eat wrong sort of food
 - They don't take enough exercise
 - They watch TV too much

Entirely victim blaming

Contemporary responses should be:

The Guardian Jun 13th 2019

Two-hour 'dose' of nature significantly boosts health - study

Researchers say simply sitting and enjoying the peace has mental and physical benefits.

A two-hour "dose" of nature a week significantly boosts health and wellbeing, research suggests, even if you simply sit and enjoy the peace.

The physical and mental health benefits of time spent in parks, woods or the beach are well known, but the new research is the first major study into how long is needed to produce the effect. If confirmed by future research, two hours in nature could join five a day of fruit and veg and 150 minutes of exercise as official health advice.

Changing approaches:

- Keener to emphasise maintaining health and wellbeing as well as disease Dx and Mx
- Overdiagnosis – treating people as a series of one –disease systems instead of systems with multiple conditions in parallel
 - Wastage of resources, duplication of effort, iatrogenic illness caused by medication and medication interactions
- Realisation that much ill health has social determinants
 - Housing
 - Education
 - Income
 - Lifestyle
- Encouraging a more central role for people in making decisions about their health and care

How does it fit with wider health and social care policy?

- 2006 highlighted in White Paper 'Our health our care our say'
- 5yFV 2014 – focus on prevention and wellbeing, patient-centred care and highlighted role of 3rd sector in services that promote wellbeing.
- GPFV 2016 – role of voluntary sector organisations through social prescribing to reduce pressure on GP services
- June 2016, NHSE: national clinical champion for social prescribing to advocate and share lessons of successful projects
- NHS Long Term Plan –
 - Give people more responsibility for, and control of their own health
 - 2.5 million will benefit from social prescribing schemes by 2024
- New GP Contract NHSE (2019) – Primary Care Networks will be funded to employ 1 social prescriber each from 2019
- Wales – Prudent Healthcare – 'co-production with patients'
- Scots Contract – Realistic Medicine
- Guidance for commissioners in Local Govt docs and a new Social Prescribing Network.

So what is 'social prescribing'?

Definition:

Non-medical interventions to address wider determinants of health and help patients improve health behaviours and better manage their conditions, potentially reducing healthcare demand and costs.

Been around for many years!

'Boiler on prescription' scheme transforms lives and saves NHS money

Pilot project in Sunderland hailed a success with GP and outpatient visits reduced by a third and heating bills cut by £30 a month

This trial boiler on prescription scheme in Sunderland was seen to make a 'massive' difference to people's lives, raising temperatures by 3C and saving £30 a month. Photograph: Gentoo

Who else could benefit?

- Wide range of social, emotional or practical needs
- Focus on improving mental health and physical wellbeing
- Eg.
 - people with mild or long-term mental health problems
 - vulnerable groups
 - people who are socially isolated
 - frequent attenders to Primary or Secondary healthcare

What does this mean for the
 jobbing clinician?
 The Mountain Ash story

Cynon Vale medical practice, Mountain Ash

- A typical, traditional South Wales valleys practice, part of a cluster.
- List size approx 4,500
- Working out of poorly appointed premises with portacabins locked on
- 2 partners, 3 salaried doctors – all P/T.
- Economically deprived older community
- High Street: Iceland, fast food shops, nail bar, tattoo bar, Bookies, post office, knitting shop
- From August 2018:
 - Clinical pharmacist
 - OT
 - Wellbeing co-ordinator

Cynon Vale becomes a ParkRun practice!

The impossible happens

Supported by the team made it happen...

How do these developments make me feel as a GP?

- Cautious, early days...
- Thrilled by the scope of social prescribing – suddenly I have so much more to offer patients
- Starting to see the effects on patients' lives
 - Community garden
 - Referrals to a variety of 3rd sector and community organisations I'd never known about before
- Fits with my own belief that you can't expect to find the answer to many of life's events in a pill...
 - 'give a man a fish and you feed him for a day – teach him how to fish, and you feed him for the rest of his life'.
- And it's helped a couch potato (me) get up and start running!!

How does the NHS relate to social prescribing specifically?

Will it make a difference to patients, communities and clinicians?

- In areas where social prescribing is used
 - Clinicians are more resilient
 - Clinicians are happier
- In the long term, if done on a population scale, we could have people developing their chronic conditions later than currently, and having a better quality of life throughout.
 - ? Communities more resilient
 - ? Communities more happy
- May reduce waiting lists/ NHS workload if morbidity reduces, but we've been waiting for this since the inception of the NHS!

Will social prescribing be the answer to the NHS' problems?

- It won't solve the manpower problems
 - Still short of 7000 GPs
 - Still short of 20,000 nurses
- It won't solve bureaucracy, management and financial problems in the NHS – the NHS needs to sort its own house out!
- The population will continue to age, with chronic illnesses and multi-morbidity
 - Biomedical knowledge and skills will still be needed
 - But by combining forces, the sum will be greater than the parts!

Looking ahead...

- We will be much more digital... and able to monitor people much more closely at home in 'real time' (currently <0.1% of time is spent with an HCP – the rest of the time is unsupervised!!).
- Personalised medicine, genomic medicine, drones, Siri/Alexa, avatars, monitors and wearables
- Better understanding of the body as a complex system, rather than discrete diseases
- We will be promoting wellness much more than currently
 - We will be working harder to engage the public, and understand better how to support patients
